	/Bradley T King/ Primary Examiner, Art U	nit 3657					

Continuation of 11, does NOT place the application in condition for allowance because: It is maintained that the rejections are proper. It would have been obvious to one of ordinary skill in the art at the time of invention to apply the known technique of measuring and machining springs to provide a desired spring rate within a desired tolerance, as evidenced by the cited article, to the spring of Glimore as it would yield the predictable results of an increased tolerance to the valve and provide predictable performance. It is further maintained that one of ordinary skill in the art appreciates the effects of tolerance on the precision of the device and that one would be motivated to improve tolerances as dictated by the desired application. The fact that Glimore provides an adjustment feature would not preclude one from trying to improve the overall accuracy of the device. Also note MPEP 2143. Regarding the "sonic flow" features, the efatures are dependent on the unclaimed use and environment of the valve. It is maintained that the passages of Glimore are capable of "sonic flow" at some flow rates.
